- Languages: HTML, CSS, JavaScript, React, NodeJS, PHP.
- Technologies: MySQL, NPM, Webpack, Git, SCSS, Gulp.
- Other: Data structures, Linux, algorithms, UX/UI design.

Interests

In my spare time, I'm passionate about music and sports. I've been playing the guitar for five years, entirely self-taught. This journey has not only improved my technical skills but has also been a source of personal creativity and discipline.

On the sports front, I've been actively involved in competitive handball for the past six years. The dynamic and strategic nature of the game has not only kept me physically fit but has also taught me valuable lessons in teamwork, strategy, and resilience.

These interests represent more than just hobbies—they reflect my commitment to continuous learning, personal growth, and the pursuit of excellence. I believe the skills developed in music and sports complement my technical abilities, creating a well-rounded approach to both professional and personal aspects of life.
